

When will I know if it is time to reseal my granite?

Q. When will I know if it is time to re-seal my granite?

A. To find out if your granite or other natural stone is still adequately sealed, spill some water on it and wait for approximately half an hour, then wipe it dry. If the surface of the stone did not darken, it means that the stone is still adequately sealed. You may want to do this test in the most used areas. Our free, downloadable [Stone and Tile Care Guide](#) has more information about sealing. It is best to have a professional stone restoration contractor reseal your granite. If you do not already have a PRO, [contact us](#).
