

## **What's the best way to clean grout off a newly installed marble floor without dulling the marble? All grout cleaners seem to contain acid.**

Several excellent grout cleaners are available from your stone care supplier that will not dull polished marble. Try a mild solution of bleach ; use a soft tooth brush to apply the solution to the grout joints and scrub lightly.

***TIP If the grout is very dirty it may be impossible to clean. It is best to remove a thin layer of grout and replace with new grout.***
