

Help! My cleaning lady spilled diluted bleach or something that etched my Crema Marfil marble.

Q. Help! I think my new cleaning lady might have accidentally applied diluted bleach (but I'm not sure) to my Crema Marfil countertop. It has a white film and seems to have lightened the color of the countertop in some parts. Is there anything I can do to improve the situation?

A. Click [here](#) to locate a Stone and Tile PRO in your area to have them come in and evaluate the severity of the damage. In the meantime, purchase a stone-safe, pH-neutral cleaner for your cleaning lady to use on your countertops. You may want to download our free [Stone and Tile Care Guide](#) as well.
