

What should I use to clean my travertine surfaces?

Q. Should I use a brush on my travertine shower floor and sides to get it clean? What kind of cleaner?

A. Using a brush along with any cleaner will generally yield better results. MB-1 should be used for general light duty cleaning. For heavy duty cleaning use MB-2. For soap scum and hard water use MB-3. Always carefully follow the directions printed on the label. You may want to download our free [Stone and Tile Care Guide](#) for more information. Also see our [Stain Management App](#) for more details about cleaning your stone and tile.
