

How to Treat Juice Stains on Pietra Cardosa

Q. Hi, there are gray spots where lime juice spattered on my Pietra Cardosa counters. How can these spots/stains be removed?

A. What you are describing are etch marks as a result of the acid from the juice. If the damage is very severe, you'll need to contact a stone restoration contractor. If the damage is minor (you can't feel the roughness with your fingertips), then a good quality stone polishing compound will do the trick. Try etch removal marble polish. For recommendations contact your professional stone and tile restoration contractor.

If the damage is too extensive, a restoration contractor can fix it for you. To locate a PRO, [contact us](#).
