

How To Clean Hard Water Stains on a Granite Vanity Top

Q. Do you know of a product that will get rid of the hard water stains on my granite vanity top (it's really bad around the faucet fixtures)? I look forward to hearing from you.

A. A good quality, stone safe soap film remover will be effective at getting rid of hard water deposits as well as soap scum. Sometimes a razor blade may be necessary as well to shave off the some of the build up. You can read more information by referring to <https://surfacecarepros.com/common-tile-cleaning-mistakes/>.
