

How to Clean Motor Oil from Driveway Pavers

Q. A parked car on our driveway apparently leaked oil onto the pavers. What product can I use to remove it, or do they need to be replaced?

A. More often than not, dirty pavers can be cleaned and restored to like new condition for a lot less than the cost of replacement. Our stone experts recommend using a poultice with a good degreaser on your pavers. The poultice can be flour or any commercial, plain poultice powder mixed with a degreaser.
