

Use of neutral cleaner on black leather countertop.

Q. Can I use neutral stone cleaner on my black leather countertops?

A. By black leather countertops are you referring to the leather-look treatment on your natural stone countertops? If so, then yes, of course, a quality neutral cleaner for stone is the ideal product to use. On the other hand, if your countertops are literally leather (a very unusual countertop material, indeed!), a neutral cleaner should be fine, but you may you may want to use a product specifically designed for leather care.
