

What can we do to make our front door steps less slippery?

There are several options for making the steps less slippery.

Option 1. The steps can be honed and the polish removed. The high-gloss shine will be gone, but the steps will be less slippery. This can be done by a qualified stone restoration contractor.

Option 2. Slip tape can be purchased at your hardware or home center and attached to the steps.

Option 3. Some stone and tile service contractors offer a treatment, which once applied, will add slip resistance to the steps. Most of these treatments are acid-based, however, and will detract from the shine.

Option 4. There are many brands of coatings or waxes that can be applied to the steps for added slip resistance. Be sure the coating you choose is resistant to ultraviolet (UV) light, or the coating may turn yellow.
