

Will solvent remove grout haze on porcelain tile?

Q. Is there a solvent that can be used to safely remove years old grout haze from porcelain tile? I can provide more information as you need. Thank you.

A. For standard grout, you will need an acid-based grout cleaner. For epoxy grout, then a strong solvent, such as methylene chloride will be needed. Grout haze can be very difficult to remove. You may want to hire a professional. To find a Certified SurpHaces PRO Partner near you, [contact us](#)
