

Can an impregnator be used to waterproof stone?

Q. Can an impregnator be used to waterproof stone?

A. No. An impregnator will make the stone water resistant, not waterproof. To make the stone waterproof, you would need to completely block the pores of the stone. If this is necessary, I would recommend a topical coating. Your stone restoration PRO will be able to guide you on the specifics of your stone and the options available. You can find a PRO near you by going to www.surfacecarepros.com.
